

Best Barns USA Assembly Book

Revised July 21, 2014

the Sierra

12' x 16'

Manufactured by Reynolds Building Systems, Inc.

205 Arlington Drive

Greenville, PA 16125

724-646-3775

This manual is copyrighted. Under the copyright laws, this manual may not be copied, in whole or in part, without consent from Reynolds Building Systems, Inc. © Copyright 2011

IMPORTANT INFORMATION ABOUT YOUR SHED KIT

Thank you for purchasing our Sierra kit. These instructions will construct a 12'x16' building. **If you received two books, use the one with the latest revision date.**

If you have any questions about assembling the kit, call 800-245-1577. If you are calling after normal business hours, call 724-866-HELP (4357) or email to help@barnkits.com.

Before you begin construction, be sure to study this assembly manual. Also, obtain a building permit and check all pertinent building code regulations.

The material that is included in our kit is listed on the back page. The optional floor package, *if ordered*, will be supplied by a local lumber supplier.

The door opening is for a 8' wide x 7' high garage door. You will need to order your garage door with an 9" low headroom kit.

The foundation size should measure 12'-0" wide by 16'-0". **Do Not** make the foundation larger than the building size. The siding should project beyond the foundation for water to expel properly from the sidewalls.

IMPORTANT: Unpack the material from the pallet, then unscrew the 2x4s from the pallet. The bit for the screws is packed in the hardware bag. Remove the OSB panel, it will be used for roof sheathing. The 2x4s will be used for wall bracing and interior door jamb material.

When building the trusses, our instructions suggest using the floor as a work area. If your foundation is a concrete slab it will not be possible to use this method. Build the 12' long back wall to use as a platform.

The LP siding has a 50 year warranty and is already primed. Apply two coats of latex acrylic paint for the finish coat. Paint the bottom edge of the siding, this is very important. Maintain 6" to 8" of clearance from the bottom edge of the siding and the ground. Don't allow garden mulch to build up and keep shrubs a minimum of 1' away from the building.

Thank you for your purchase.

Bill & Linda Rinella, owners

Tool List

- | | |
|--|---|
| <input type="checkbox"/> Hammer & Phillips Screwdriver | <input type="checkbox"/> Power Drill/Screwdriver |
| <input type="checkbox"/> Framing Square & Level | <input type="checkbox"/> Measuring Tape & Chalkline |
| <input type="checkbox"/> Circular Saw and/or Hand Saw | <input type="checkbox"/> 2-8' Step Ladders |

Always wear safety glasses when cutting or nailing!

Optional Wood Floor System

Shown below is a typical wood floor. Depending on your area, the construction may have to be changed to meet local codes. The foundation size should be 12' - 0" x 16' - 0".

1. Cut (2) two treated 2x4-8' boards in half.
2. Butt 4x4-8' treated runners together. Use one of the 4' long 2x4s to secure them together. Note: Use 16d galv. nails to secure all treated framing together.
3. Repeat to join the other 4x4 runners.

4. Cut (2) two 2x4-16' joist headers to 16' - 0".
5. Layout for 12" on center joist spacing. 'X' marks where floor joist will be placed.

Detail 1

2x4 - 16' 0"
Joist Header

6. Cut all the 2x4-12' boards to 11'-9". These boards will be the floor joist. *Treated lumber may be thicker than 1-1/2". Take this into account when cutting the length of floor joists. Shorten joist measurements if necessary to obtain 12'-0" building width.*
7. Install floor joist boards between the joist headers. Use 16d galv. nails. Install this section over 4x4s.

Optional Wood Floor System

8. It is important that the floor be level and square. Square the floor as follows: before nailing the flooring, measure the floor diagonally (corner to corner). Then measure the opposite corners. These measurements will be the same if the floor is square. The diagonal measurement should be 20' - 0". Nail several floor joist to the 4x4 runners to hold the floor frame in place.

9. Install floor using 8d spiral nails.

Material Description	12' x 16' shed
2x4 Treated	2 pcs. 8'
2x4 Treated	17 pcs. 12'
2x4 Treated	2 pcs. 16'
4x4 Treated Runners	8 pcs. 8'
Flooring - 3/4"	6 pcs. 4x8
Screw Floor Nails	3 lb. 8d
Galv. Box Nails	5 lb. 16d

Step 1 Assemble Trusses

Building Tip: To aid in the assembly of the trusses, temporarily screw 2x4 blocks to the floor. There are short 2x4s, *that may have an angle on one end*, supplied in kit. This will insure that all the trusses are assembled the same.

1. Screw (2) two 2x4 blocks to the 12' wide end of the floor at the corner, *see below*.
2. Place two truss legs together. Position the notch in the 2x4s (called a bird's mouth) into the 2x4 blocks. **Important:** You must have 12'-0" between the bird's mouth. Affix more 2x4 blocks above the truss legs to hold the truss members in place.
3. Secure the tops together with a wood gusset. Apply wood glue between the 2x4 boards and the gusset. Nail the gusset to the 2x4s with 6d common nails. Use 14 nails per gusset.
4. Install a 2x4-90" collar tie between the 2x4 boards. Hold in place with 2x4 blocks. Install 12"x24" gussets to the ends of the collar tie. Glue and nail using 14 nails per gusset.
5. Turn this truss over and apply wood gussets to the opposite side.
6. Repeat 2 through 5 to assemble (6) six more trusses.

Do Not remove blocks from floor until completing **Step 2**.

Step 2 Assemble Roof Gables

1. Butt (2) two 72" long 2x4s together and secure by nailing a 3-1/2" x 31-3/4" long plywood gusset across the top where they butt together. Use glue and 6d common nails.

2. Place (2) two truss members in the jig. Secure the top together with a barbed metal plate.
3. Remove the 2x4 blocks at the corners of the floor and insert the gable plate assembled above into the bird's mouth. Make sure the 2x4 gable plate is straight. If necessary, tack 2x4 blocks to hold plate straight.

4. Remove the two 2x4 blocks that held the collar tie in position.
5. Install 2x4x23-1/2" gable studs. Nail through the bottom plate with 10d sinkers and secure the top with barbed metal drive-on plates.
7. Repeat to assemble another gable. Remove 2x4 blocks.

Step 3A Install Siding on Gables

1. Select one of the gable frames, Turn the gable over letting the bottom plate overhang the floor so the gable lays flat.
2. Install gable siding using 6d galv. nails across the top of the gable frame. Use 8d galv. nails along the bottom edge. See Note Below. *

3. Install siding on the other gable frame.

Step 3B Build 2x4 Assembly

1. Locate (2) two 49-1/2" boards that have shorter 2x4s attached. Butt these boards together.
2. Apply glue over the exposed area of the longer boards. Using 6d common, nail a 3-1/2" x 44" OSB filler over the bottom boards. Align the boards against the floor or other object to make sure the boards are straight before securing the OSB filler.
3. Install a 55" long 2x4 over the OSB filler. For added strength apply glue between the 2x4 board and the OSB filler. Secure with (8) eight 2-1/2" long deck screws at each end and the center.
4. Mark this side (B) so when installed this side will face the back of the building. Another layer of 2x4s will be installed after the 1x6 door jamb is installed.
5. Install (8) eight more screws on the opposite side in the center as shown.

Step 4 Assemble 12' Back Wall

1. Position 2x4-68-1/2" boards together and indicate with 'X' marks, where the wall studs will be located. Mark the ends that will butt together with the letters 'A' and 'B'.

2. Install 7' wall studs between the top and bottom plates. Assemble wall frames with 10d sinkers, two (2) nails at each stud end. Nail both wall frames together.
3. Square wall frame. *Measure diagonally (corner to corner). The measurements will be the same when the wall is square.*
4. Install the first siding panel with the 'LAP' edge extending 3-1/2" past the wall frame. The bottom will extend 3/4" below the bottom plate. Use 8d galv. nails spaced 12" apart.
5. Install the other siding panels. Cut the last panel to extend 3-1/2" beyond the wall frame.

 ***The siding will be 1/2" below the top of the wall frame on all walls.***

Step 5 Assemble 12' Long Sidewalls

1. Position 2x4-72" boards together and indicate with 'X' marks, where the wall studs will be located.

2. Install 7' wall studs between the top and bottom plates. Nail both wall frames together.

If you are installing the optional walk-in door see the instructions at the back of the book.

3. Square wall frame. Install the first siding panel with the 'LAP edge' flush with the end of the wall and extending 3/4" below the bottom plate.
4. Install (2) two more siding panels.

5. Repeat to assemble the another sidewall.

Step 6 Assemble Sidewalls for 16' Building Length

1. Install (3) three 7' wall studs between (2) two 48" long 2x4s boards. Install the middle stud in the center of the wall frame.
2. Repeat to assemble another 4' wall section.

3. Select one of the 12' sidewalls assembled in **Step 5**. Butt the 48" wall frame against the wall with siding. DO NOT nail these frames together so they can be separated later.
4. Install a full width siding panel but do not nail along the long edge that overlaps the 12' wall frame. You can nail this edge after the wall panels are installed. This will enable you to separate the wall panels making them easier to handle.

5. Repeat to apply siding to the other 4' wall frame.

Step 7 Assemble Door Walls

1. Locate a 7' wall stud with a 83-1/2" long 2x4 attached.
2. Assemble a wall frame using a 7' wall stud, the double stud and (2) two 19" long 2x4 wall plates. Use 10d sinkers.

3. Repeat to assemble another wall frame.
4. Locate a 24" wide siding panel that has a 'LAP' edge. Position this panel with the 'LAP' edge flush with the 2x4 header support and extending 3/4" below the bottom plate.

Mark 'Right Frontwall'

5. Install the remaining siding with the tongue edge flush with the edge of the 83-1/2" long 2x4.

Step 8 Set Walls & Install Rear Trim

1. Set wall panels. Secure at corners with 10d sinkers (4 nails per corner). Secure to floor with 10 sinkers. Disassemble shipping pallet and use the 2x4s to brace the front wall and the sidewalls.
2. Install the pre-built 2x4 assembly, from **Step 3B**, between the front wall panels. Install assembly on the front wall panels with the side marked with the letter 'B' facing the back of the building.
3. Install (2) two 3-1/2" x 48" siding panels over the built-up assembly. Note: The trim boards will hide where the siding panels meet; the fit does not have to be exact.

4. Install 87-3/4" long 1x4 corner trim boards to the rear wall. Install trim flush with the 2x4 top plate and flush with the siding on the sidewalls. Use 8d galv. nails, spaced 12" apart.
5. Cut (2) two 1x4-6' trim board to fit between the corner trim boards. These trim boards measure 4-1/4" wide.

Step 9 Install Front Wall Trim & Door Jamb

1. Install 87-3/4" long 1x4 corner trim boards and 1x4 trim boards to the front wall, flush with the top plate on the sidewall.
2. Install 48" long x 5-3/8" wide primed siding material on the top of the door opening.
3. Install 83" long x 5-3/8" wide primed siding material on the sides of the door opening.

Step 10 Install Gables

1. Install a gable on the rear wall. The gable siding will extend over the 1x4 trim on the lower wall. **NOT behind the trim!**

Secure gable to wall by nailing through the gable plate with 10d sinkers. Nail siding along the 1x4 trim board with 8d galv. nails.

2. Repeat to install a gable on the front wall.

Important: Bottom edge of siding extends over 1x4 trim

Step 10 Install Gables Continued

2. Install 2x4-6' boards as tie plates on the both sidewalls between the rear and front gables. Use 10d sinkers.

Step 11 Layout Roof Trusses

1. Layout the truss spacing from the rear of the building. Measure from the inside of the rear gable when marking the location of the first truss. **Important:** When marking the opposite wall, place the 'X' mark on the same side of the line so your trusses are parallel when they are installed.
2. Using 1-1/2" hanger nails, install metal hangers to the 2x4 tie plate. The opening should line up with the 'X' mark, the bottom of the opening, flush with the 2x4 tie plate. See **Detail 'D'**.

Detail 'D'

Step 12 Set Roof Trusses

Set roof trusses. Secure trusses to metal hangers with 1-1/2" hanger nails.

Step 13 Install Eave Soffit & Corner Trim

1. Locate a 5" wide x 24" siding panel that has a 'tongue' edge. Install this panel under the truss overhang at the rear of the building. Install the siding/soffit panel with the beveled edge flush with the end of the trusses and the cut edge against the gable siding. Use 6d galv. nails.
2. Install (4) four more full length siding panel under the trusses. Cut the last panel to fit.
3. Install soffit panels on the opposite side. Start with a 24" long panel that has a 'LAP' edge.

4. Cut 87-3/4" long 1x4 trim boards to length and install at the corners.

Step 14 Install 1x6 Fascia & Roof Sheathing

1. Starting at the rear of the building, cut 1x6-7' white pine fascia boards to 6' and install on each side, flush with the face of the siding on the back gable.

Install the fascia so the bottom edge of the roof sheathing will rest on the 1x6. Use a straight edge to align the 1x6 boards with the top of the trusses. Install fascia with 8d galv. nails.

1x6 -6' Fascia Board

2. Cut another 1x6-7' board to 6' and install in the center of the building.

3. Install roof sheathing per layout below. Make sure the trusses are plumb and the roof sheathing meets the center of the truss. Use 7d sinkers spaced 12" apart. The top row of roof sheathing will be about 1" below the ridge to allow for ventilation. **Important:** Make sure the front gable is plumb and the roof sheathing extends 8-1/2" past the siding along the face of the gable.

Sheathing Will Extend 8-1/2" Beyond Gable

Step 15 Install Front Soffit

1. Install 86-1/4" long 2x4s under the roof sheathing, against the front gable.
2. Install 86" long 2x4s under the front edge of the roof sheathing. Hold the 2x4s against the roof sheathing and screw through the sheathing into the 2x4 boards. Use 1-5/8" long screws.
3. Install 8-1/2" wide siding under the gable overhang as the soffit. Use 6d galv. nails.
4. Install (2) two 87" long 1x6 trim boards over the 2x4 boards, flush with the top of the roof sheathing. Use 8d galv. nails.
5. Cut 1x6-7' long 1x6 fascia boards flush with the 2x4 boards at the front of the building.
6. Install 1x6 trim on the back gable.

Install Optional Door Sill

If you ordered the optional floor, install the galvanized door sill. Secure sill with pan head screws.

Step 16 Install 2x4 Around Door Jamb

1. Install a 2x4 - 7' on the inside of the door opening to support the door track.
Use 2x4 wall bracing material
2. Install 51-1/2" long 2x4s across the top of the door jamb.

VIEW FROM INSIDE

Step 17 Install Roofing — Not Supplied in Kit

1. Install metal roof edging perimeter of the roof area. If you are not installing shingles at this time, you can purchase felt paper to protect the roof sheathing. Install the felt paper before you install the metal roof edge.

2. Install shingles according to the instructions on the wrapper. If you need more detailed instructions on installing shingles, there are good publications at book stores or newsstands.

Building Tip: Install a ridge vent in lieu of shingle caps. Ridge vent provides ideal ventilation, preventing heat or moisture from damaging your building or its contents.

Optional ridge vent provides ideal ventilation.

Optional Door Opening

1. Cut (2) two 80-1/2" long header supports from 2x4-7' boards.
2. Cut (2) two 37-1/2" boards from a 2x4-7'.
3. Cut a 3-1/2" x 37-1/2" filler from a 48" long OSB board included in the kit.
4. Assemble the door header.
5. Install door header over header supports.

<i>Material Packaged In Lumber Kit</i>
